

The visibility system built only for restoration companies.

When a homeowner has water pouring through their ceiling at 11pm, they don't research ten contractors. They search Google — or ask ChatGPT — and call one of the first companies they see. **Rank AI's job is to make sure that company is yours.**

Not an agency. Technology.

Agencies put people on your account — and people have to prioritize their newest client, so the longer you stay, the less attention you get. Rank AI is software. Our team builds technology, and every time it improves, **every client gets the improvement automatically.** It monitors and strengthens the signals Google and AI platforms use to decide which restoration companies deserve to be seen — continuously, month after month, because that's what it was built to do.

THE OLD WAY

- Monthly retainer, 6-month contract
- Optimize once, move on to the next client
- Reports instead of results
- "Google changed something. SEO takes time."
- When it fails — you're the problem

RANK AI

- No contract — easy to work with, easy to get rid of
- Re-optimizes and resubmits itself every week
- Live dashboard: rankings, calls, reviews
- Built for Google **and** ChatGPT, Gemini, AI search
- If we don't think we can help, we'll tell you

Three things, one system

1 · Get found

A new website built to be read by Google *and* AI — every service, every city, unique pages. Blog content published weekly. YouTube videos. Google Business Profile optimization, indexing monitored and resubmitted automatically. Google LSA ads managed for you — you pay Google only for confirmed leads, and our AI disqualifies junk calls so you get refunds.

2 · Get trusted

Reviews are the #1 factor deciding who shows up in the map pack. We run a review reactivation campaign to your past customers (most companies are sitting on hundreds of un-asked-for reviews), then keep new ones flowing after every job — with 40% of reviews coming from the follow-up most companies never send.

3 · Never miss the call

Every account includes our 24/7 AI receptionist — the same one restoration companies pay \$600/month for on its own. It answers every call, qualifies every lead, dispatches to the right person, and transfers to a human instantly on request. More visibility means more calls; this makes sure every one gets captured.

Why now

Homeowners are increasingly asking AI — "who's the best water damage company near me?" — instead of searching. Almost no restoration company is optimized for those answers yet. The companies that show up in AI results first will compound their lead: more calls → more reviews → higher rankings → more calls. This is a first-mover market, and the window is open.

One price. Everything included.

\$997 /month

No contracts. No setup fees. Cancel anytime. Website, rankings, AI-search visibility, content, YouTube, reviews, ads management, and the 24/7 AI receptionist — all of it. The only costs outside the flat fee: call usage beyond your \$50 monthly credit (typically \$5–10) and your LSA ad budget, which is paid to Google — not to us.

Your first two weeks are free. We start the review campaign and the AI receptionist before you've paid a dollar — so the results speak for themselves.

What week one looks like

- **Day 1:** kickoff call with your account rep, AI receptionist live, review reactivation campaign sent to your customer list
- **Day 2–3:** your new website built and staged for your approval
- **Day 5:** LSA ads live — pay-per-confirmed-lead only
- **Weeks 2–4:** indexing, AI-search optimization, content engine running — and it never stops
